

TEMPESTA

*Innovation and
craftsmanship in navigation*

An efficient, well organized and stable firm that since 1972 has specialized in the production of nautical accessories, this is ALLUFERTEMPESTA.

Our main consideration branches into two directions: on the one hand craftsmanship, with its precision and manuality that enables us to create “items” loaded with passion and human warmth, thanks mostly to consolidated experience and to an all Italian tradition for the love of “beauty”; on the other hand technology, thanks to which we can project and materialize products, study and carry out research in order to be able to compete in an ever strengthening global market.

ALLUFERTEMPESTA is a dynamic and modern firm in every aspect.

Our technical design studio is equipped with the latest technology in hard and software and we make use of platforms such as AUTOCAD (three-dimensional design, SOLID-EDGE (three-dimensional planning) and Cad-Cam software for the management of digital controlled machinery.

We are provided with avant-garde technological equipment used in the working of stainless steel, light alloy and titanium enabling us to combine at its best productivity, flexibility, repeatability and quality.

Our biggest asset, however, is our staff.

Our employees are highly skilled welders, milling-machine operators and turners and along with an ultra-modern polishing unit where irreplaceable manual work is carried out, they help make our working of stainless steel unbeatable.
